

JIM NGUYEN

vjimnguyen@gmail.com | linkedin.com/in/vjimnguyen | San Francisco, CA

Software engineer with 5+ years of experience specializing in cloud data platforms, distributed systems, and real-time streaming infrastructure. Currently building and operating petabyte-scale production data systems at Sony Interactive Entertainment (PlayStation), with a track record of measurable impact and a habit of shipping side projects for fun.

PROFESSIONAL EXPERIENCE

Software Engineer II — Sony Interactive Entertainment (PlayStation)

San Francisco, CA

September 2021 – Present

- Engineer and operate petabyte-scale production data platforms across AWS, Databricks, and Snowflake, supporting large-scale batch, streaming, and analytics workloads.
- Led a large-scale Amazon S3 Intelligent-Tiering optimization initiative that reduced steady-state storage costs by 32.7% and delivered approximately \$710K in validated annualized savings, with a recent run rate approaching \$926K annually.
- Design, build, and maintain distributed event-streaming pipelines using Apache Kafka, Apache Flink, Amazon Kinesis, Kubernetes, and Snowflake to process and deliver high-volume production event data.
- Modernize legacy data infrastructure by migrating workloads to Databricks, Apache Iceberg, and lakehouse architectures, improving scalability, maintainability, and accessibility of enterprise data.
- Develop and operate Kafka-to-Snowflake ingestion architectures using Kafka Connect and Snowflake Iceberg tables, enabling production event streams to flow into analytics-ready data stores.
- Own production reliability and incident troubleshooting across distributed data systems, diagnosing issues involving Kafka consumer lag, Flink state, Kinesis processing, Kubernetes workloads, and IAM/KMS permissions.
- Implement and troubleshoot security and access controls across AWS, Databricks, and Snowflake, including IAM roles and policies, KMS encryption, RBAC, cross-account access, and catalog-level data permissions.

EDUCATION

Western Washington University

Graduated August 2018

Bachelor of Science in Computer Science

PROJECTS

Burger Builder — burger-builder.vjimnguyen.dev

- Redux-driven single-page app for building custom orders, with persistent state across refreshes.

Personal Website & App Playground — jimnguyen.dev

- Personal portfolio and a growing set of small standalone web apps, built with Next.js, TypeScript, and Tailwind CSS; includes an interactive card-based resume and a live Craigslist listing feed.

SKILLS

Languages: Python, Scala, Java, SQL, JavaScript/TypeScript, Bash

Data & Streaming: Apache Spark, Kafka, Flink, Kinesis, Iceberg, Delta Lake

Cloud & Platforms: AWS, Databricks, Snowflake, S3, Glue, Lambda, EMR, MSK

Infrastructure: Kubernetes, Docker, Terraform, CI/CD, IAM

Observability: Datadog, Grafana, Splunk, CloudWatch
